EDUCATION

Pune Institute of Computer Technology
B.E. in Information Technology

Nov 2022 – Present
GPA: 7.00/10

Global Public School, Nashik
HSC (Class XII)

2020 – 2021
Percentage: 90.67%

PROJECTS

CODECOLLAB – Real-time Collaborative Code Editor | Node.js, YJS, Socket.io, Docker | [GITHUB](#)

- Developed a collaborative code editor supporting multiple languages (C, C++, Java, JS, Python, etc.).
- Architected **real-time, conflict-free document synchronization** using **YJS CRDTs** and the **Monaco Editor** to ensure data consistency across multiple concurrent users.
- Engineered a **sandboxed code execution engine** using the **Docker Engine API** (Dockerode) to run user-submitted code in isolated, resource-limited containers.
- Leveraged **Socket.io** for low-latency communication and stored chat history via **MongoDB**.

Quick.AI – SAAS Platform | Node.js, Express.js, PostgreSQL, Redis | [GITHUB](#) | [LIVE](#)

- Developed a plan-based **multi-service AI SaaS platform** offering resume review, article generation, image generation, and background remover.
- Integrated **Llama 3** via **Groq API** for text generation, **Pollinations API** for image creation, and **Cloudinary API** for background remover.
- Implemented **Google OAuth authentication and JWT-based authorization**.
- Built **subscription-based access control** using **Stripe Payment Gateway**, with a yearly premium plan.
- Implemented **Redis caching** to store AI outputs and user creations, improving response times and reducing API costs.
- Implemented **rate limiting** to prevent api services from being abused.

Incident Reporting and Management System | Node.js, Socket.io, Redis, Mongodb | [GITHUB](#) | [LIVE](#)

- Designed the RESTful APIs for a civic incident reporting and management platform using Node.js and Express.js, ensuring scalable and seamless data flow between the client and server.
- Implemented strict Role-Based Access Control (RBAC) to enforce isolated workflows Admin, Authority, and User roles.
- Integrated Socket.io to enable real-time notifications.
- Architected an asynchronous job processing system utilizing BullMQ and Redis to manage background queues, ensuring resilient offline email delivery for critical system notifications.

TECHNICAL SKILLS

- **Languages:** C++(for DSA and OOP) | JavaScript | SQL
- **Backend:** Node.js, Express.js, REST APIs, JWT Auth, OAuth
- **Databases:** MySQL | MongoDB | PostgreSQL
- **Tools:** Git & Github | Postman
- **CS Fundamentals:** DSA | OOP | DBMS
